

Create an Azure Web App with Static HTML Page

1 - Go to <http://portal.azure.com> and sign-in with your ExxonMobil Id

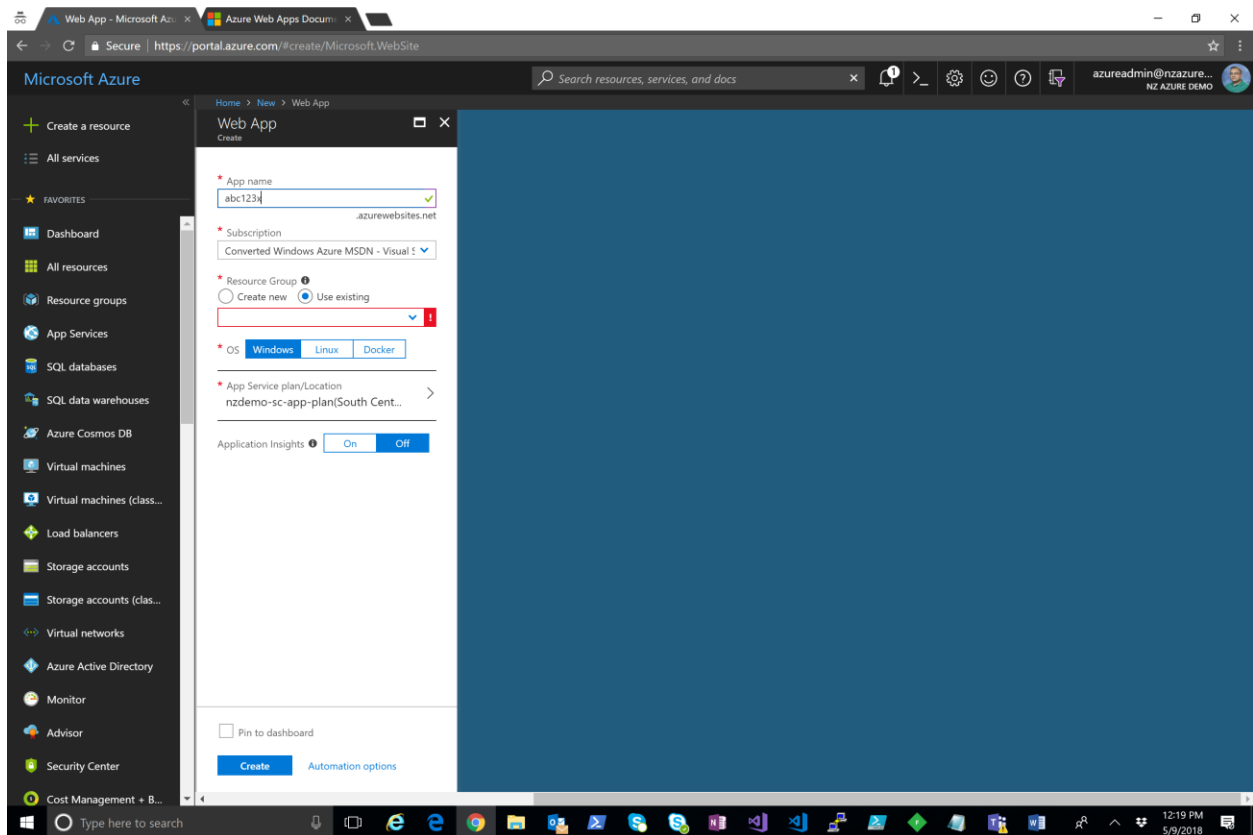

2 – Click on “+ Create Resource” and then on Web App to create a new Web App

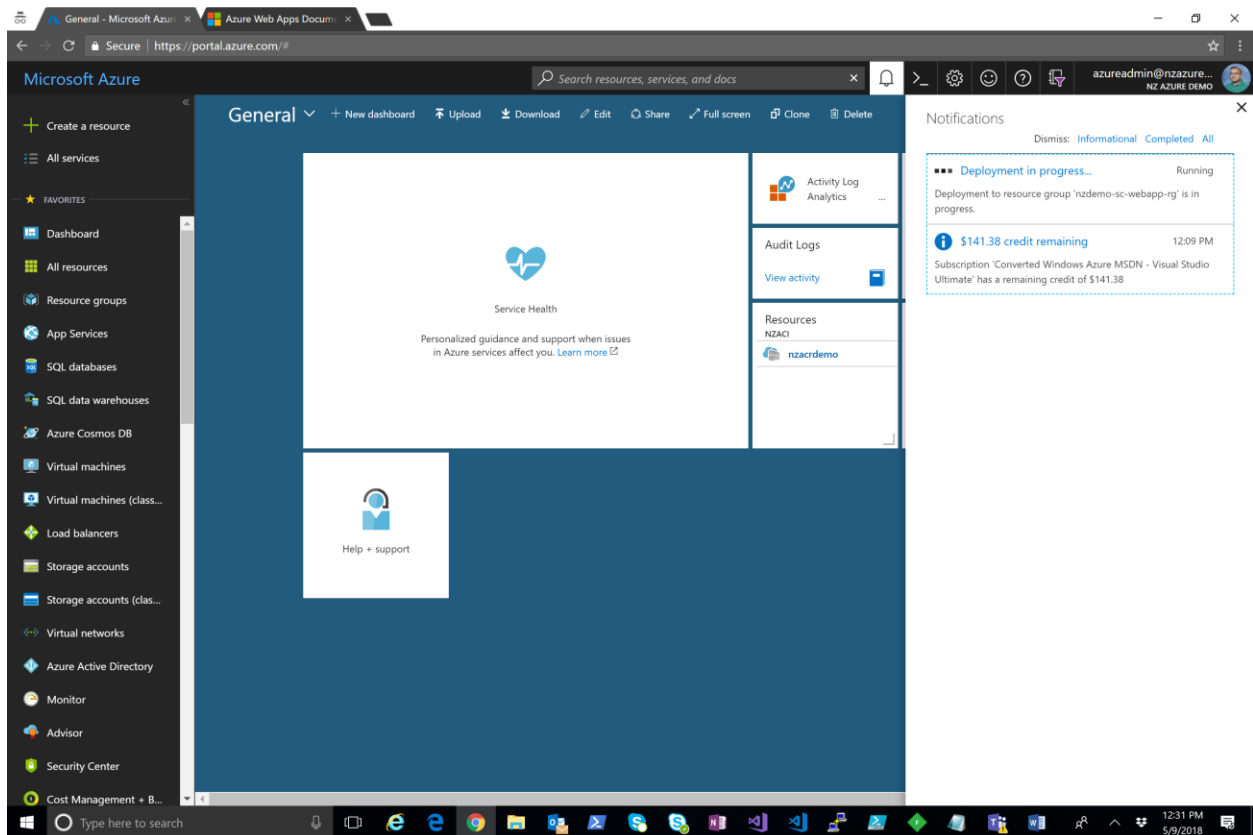

3 – On the “Create Web App” screen select or type the following. Please note that Subscription name, Resource Group name, Service Plan name and web app name may be different than the ones shown in picture.

- App Name: Use a unique name for your web app. Only alphanumeric characters
- Subscription : Use the drop down to select the only Azure Subscription available
- Resource Group: Use the drop down to select the Resource Group matching your name
- OS: Select Windows
- App Service Plan: Select the web app plan and not the plan with docker in its name
- Application Insights: Select Off

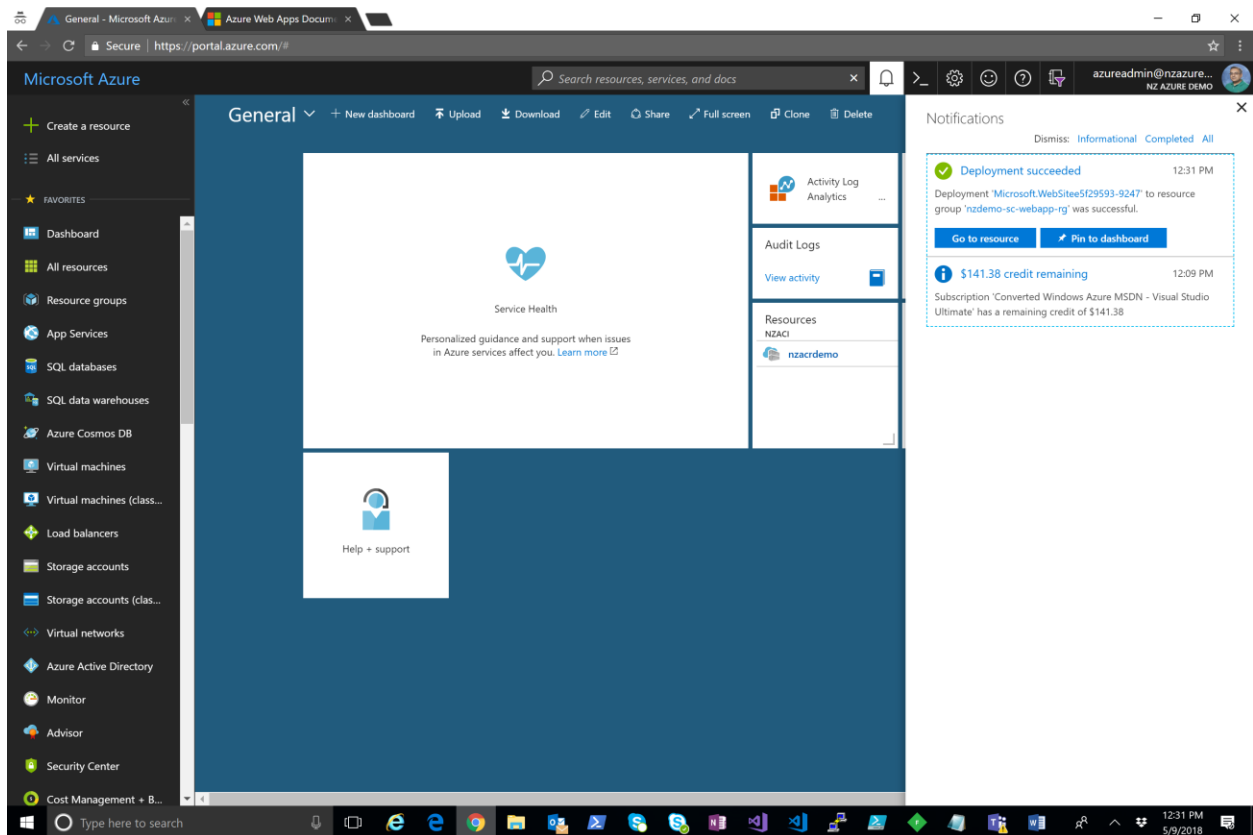

Now click the “Create” button

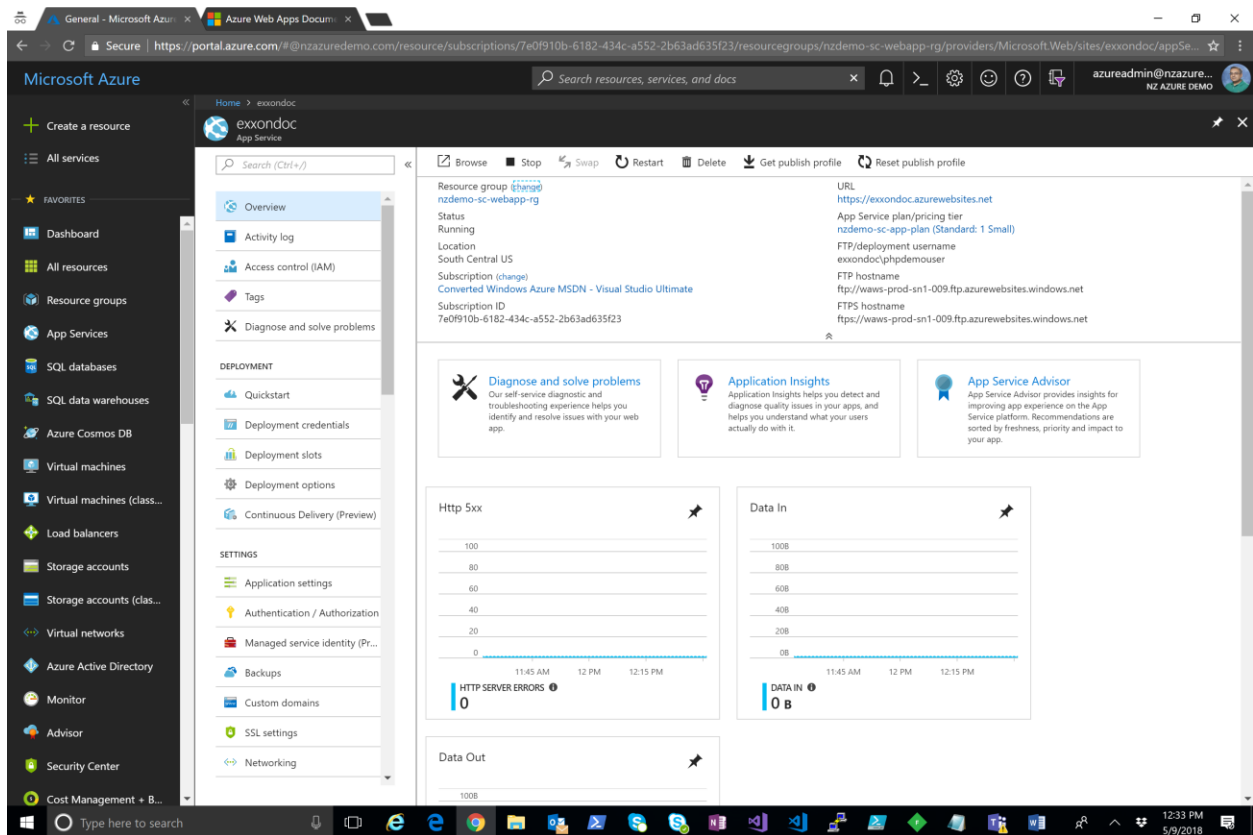

4 – It may take up to a minute for the web site to be created.

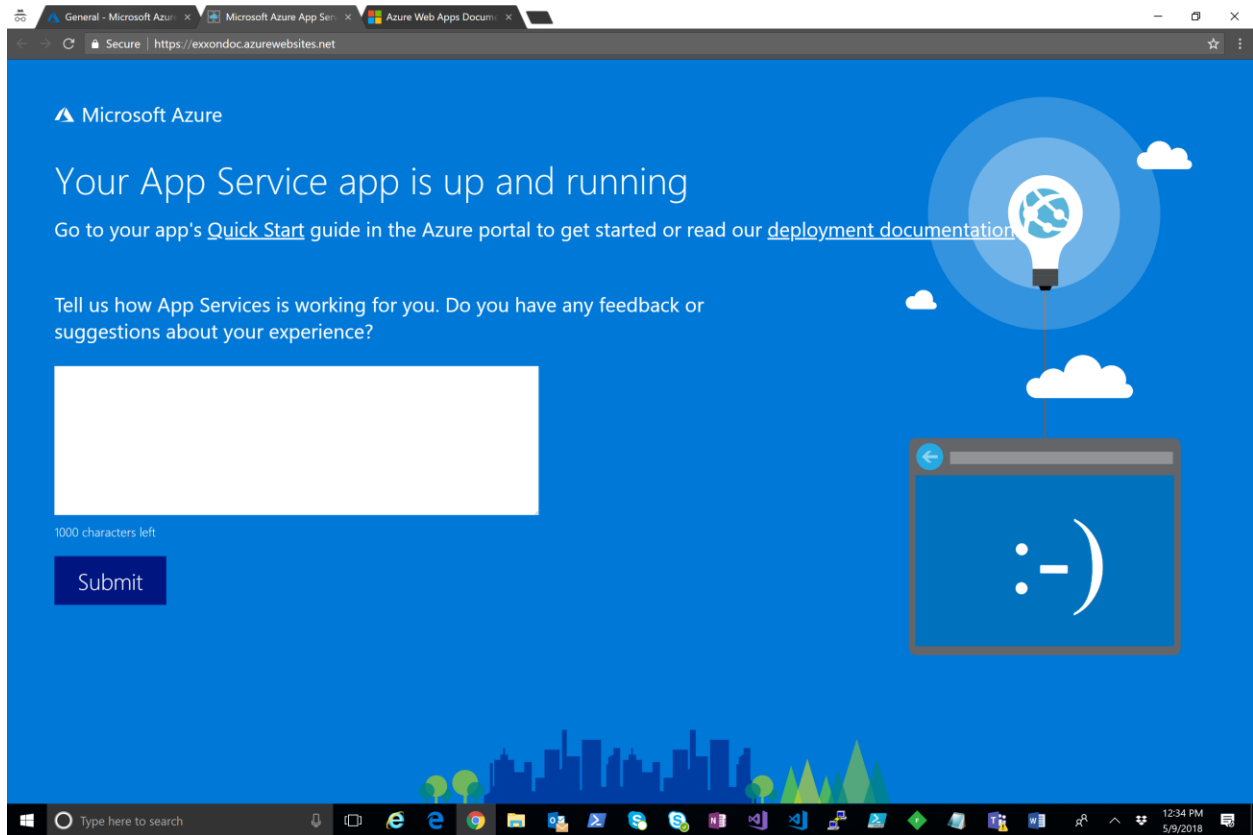

5 - Once the site is created, you will be able to access it from the “App Service” menu on the left hand side of the portal or from the “Go to Resource” button.

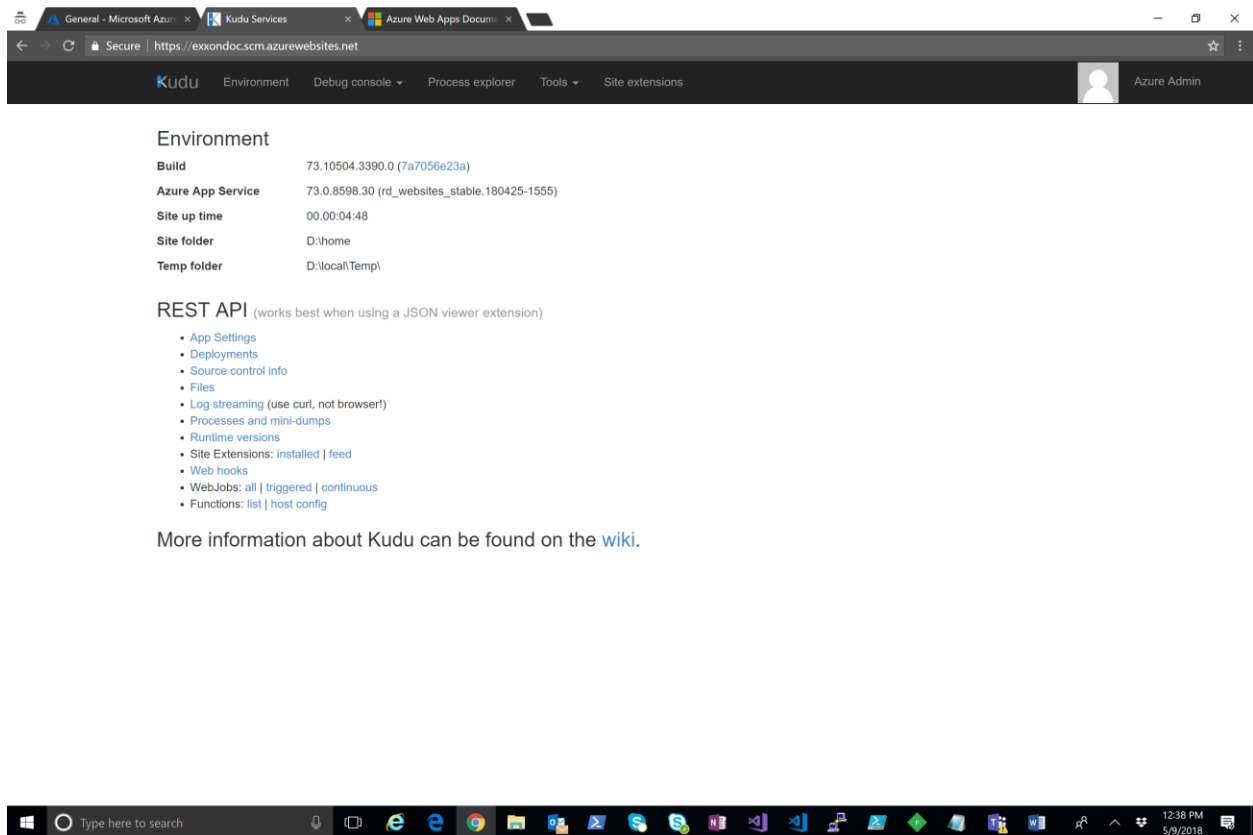

6 – The web app in the portal will look like this.

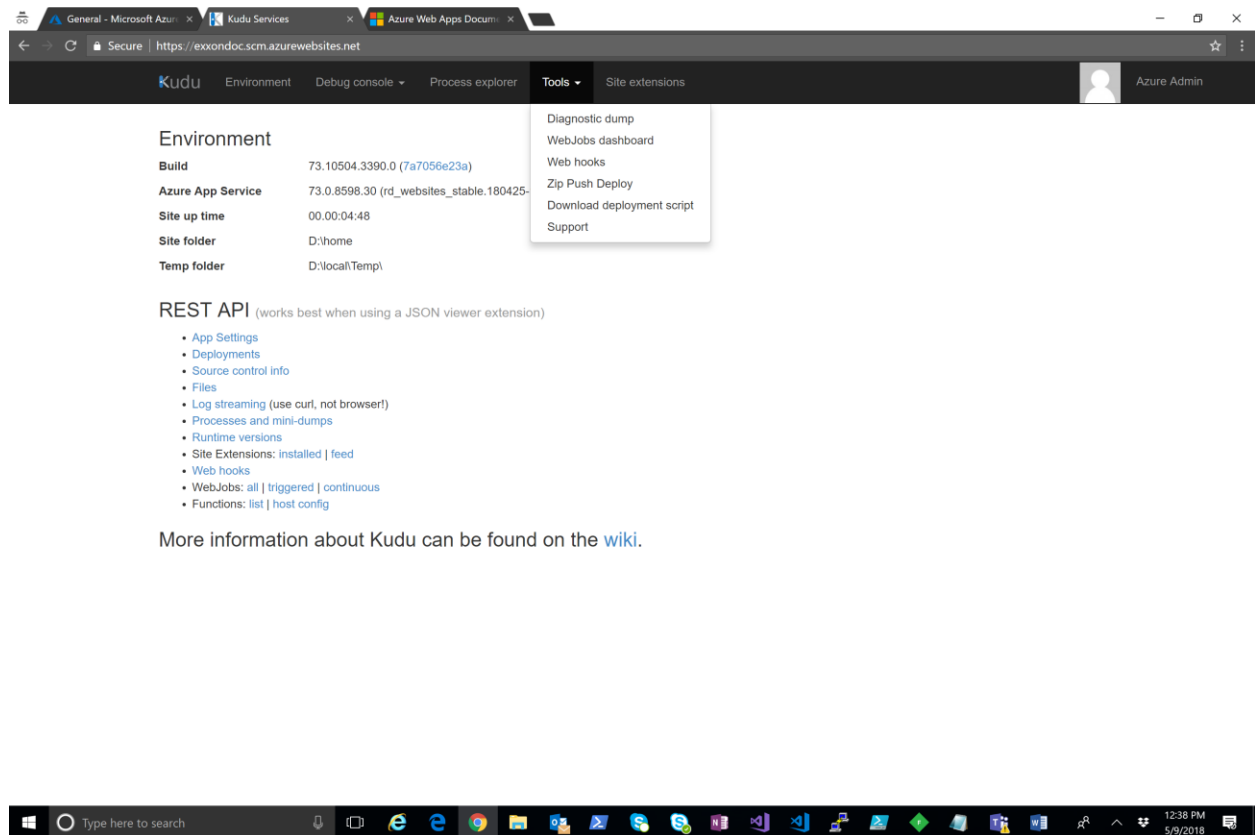

7 – Click on the “Browse” button at the top to browse you site. It will display the default ASP.NET Web App template.

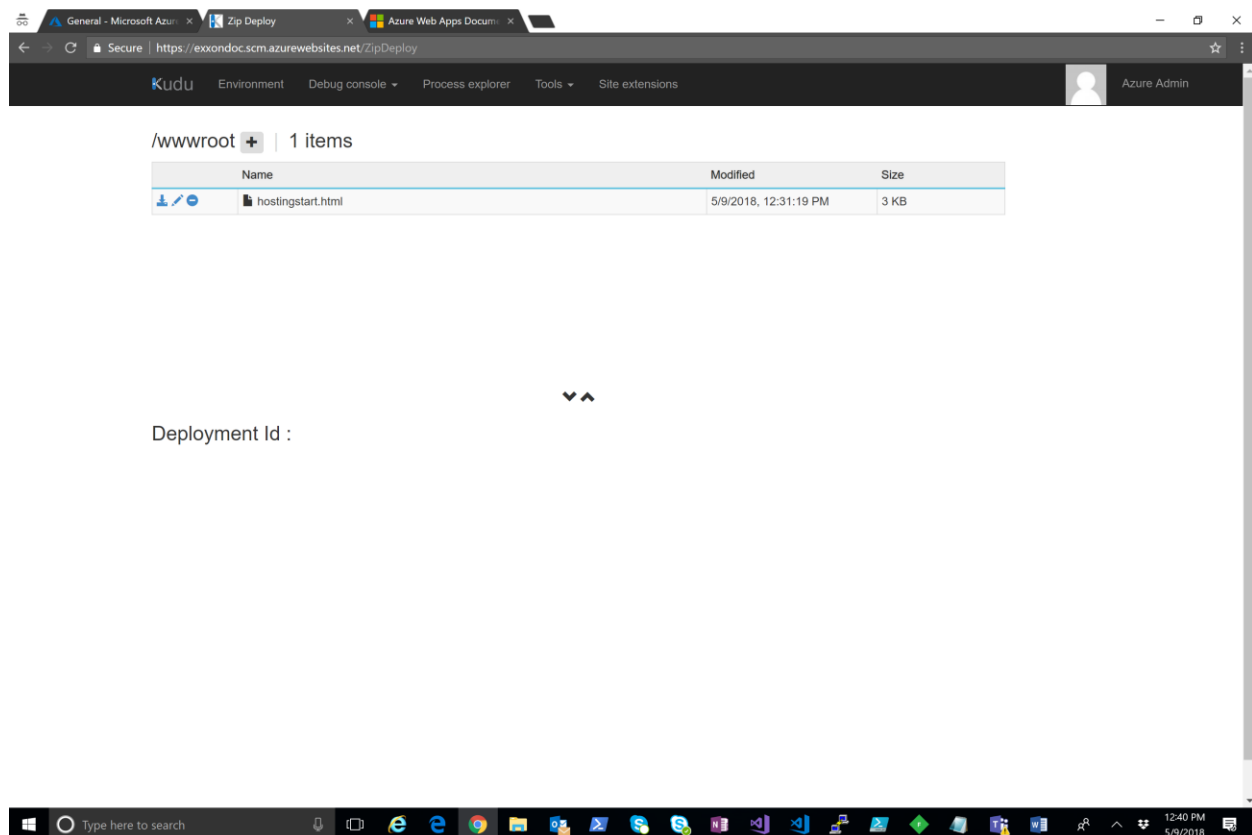

8 – In order to add a Static HTML page, we need to go to the admin UI for your Web App. To do that type "scm." After the name of your site and hit enter. So basically if you site name is "exxondoc", your admin URL will be: <https://exxondoc.scm.azurewebsites.net/>. Go to this URL and you will see screen similar to the one below:

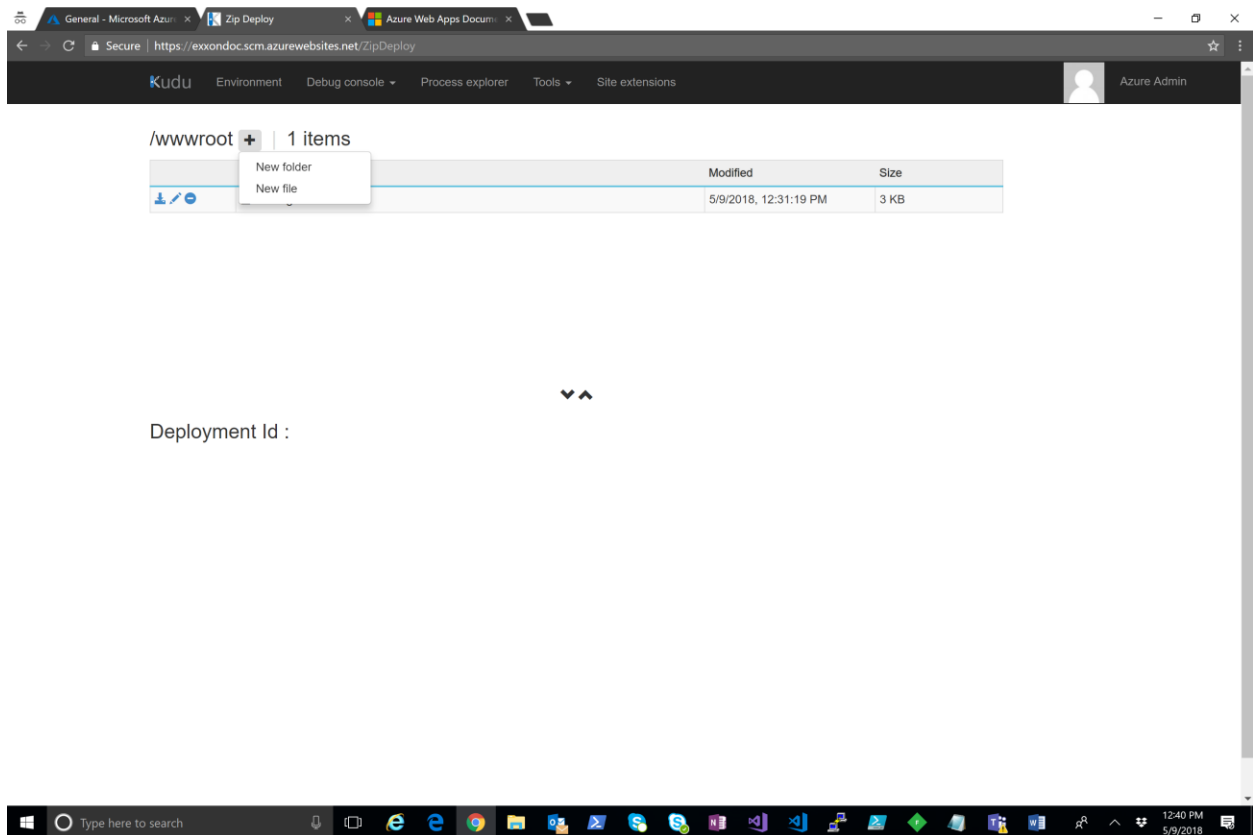

9 – Click on the “Tools” menu and then click on the “Zip Push Deploy” sub menu

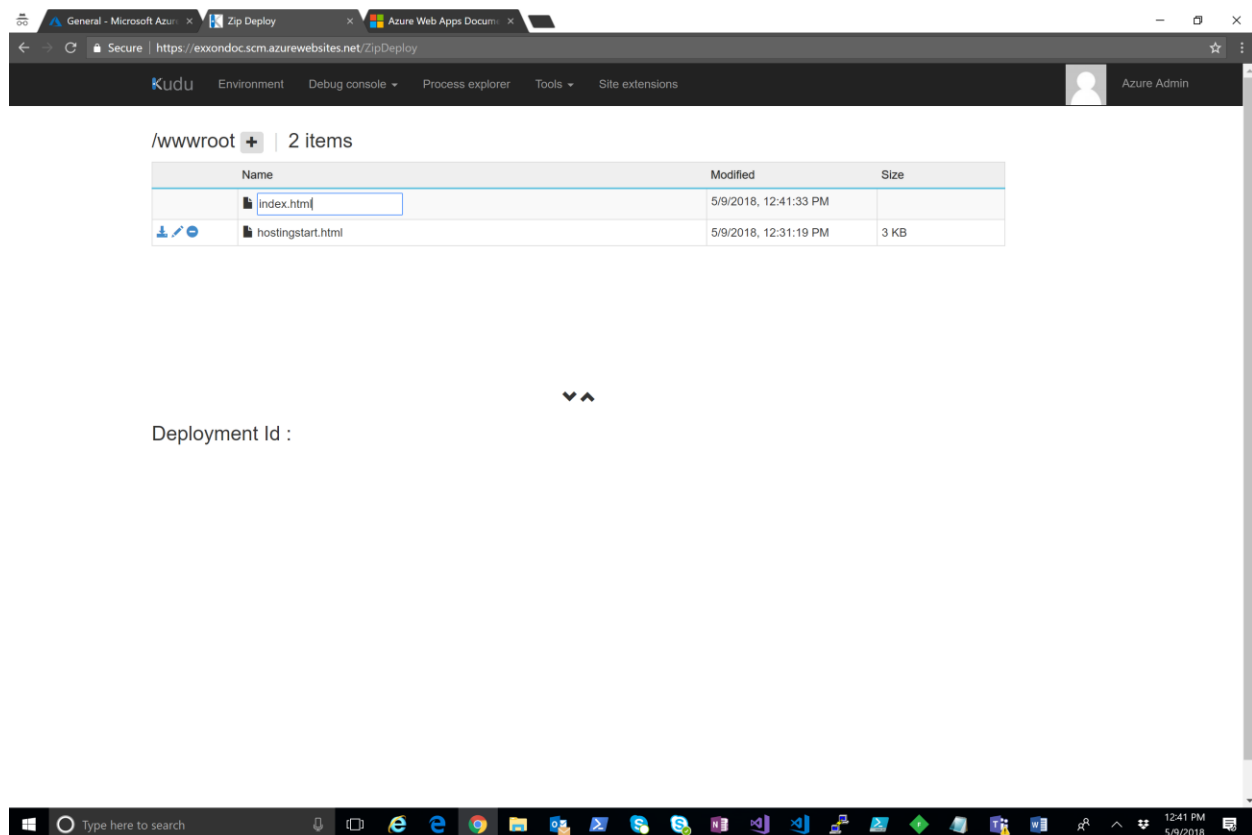

10 – This will take you to the site folder of your site.

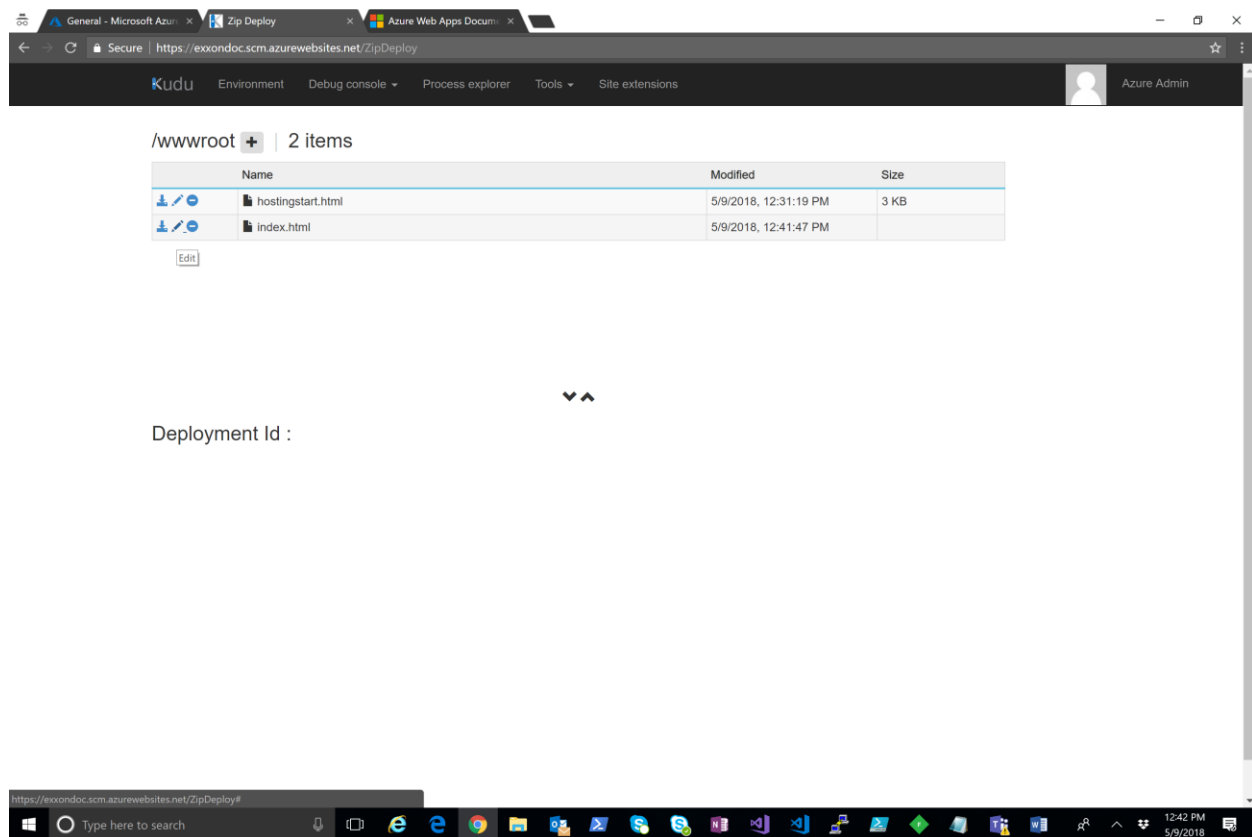

11 – Click on “+” button and then click on “New File”

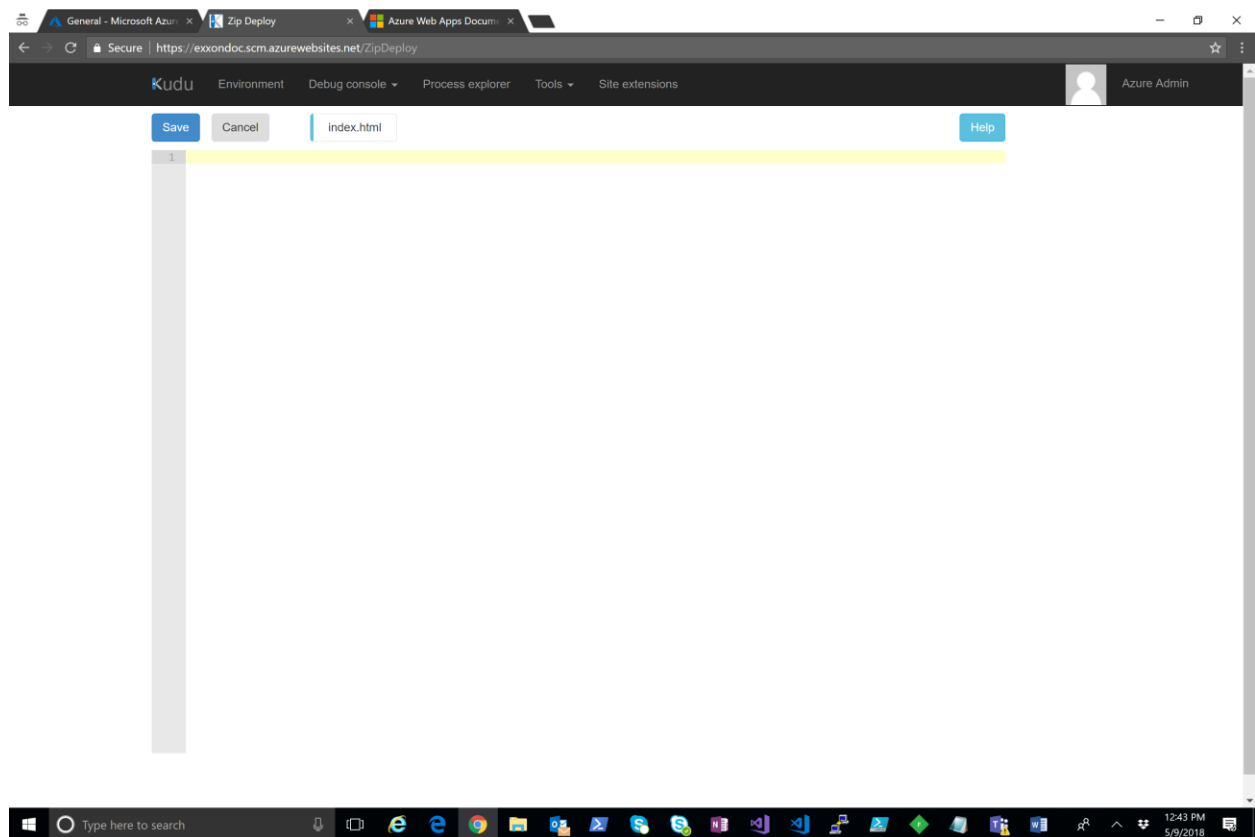

11 – Name this new file “index.html”

12 – Now click on the Edit icon next to the file to edit the file.

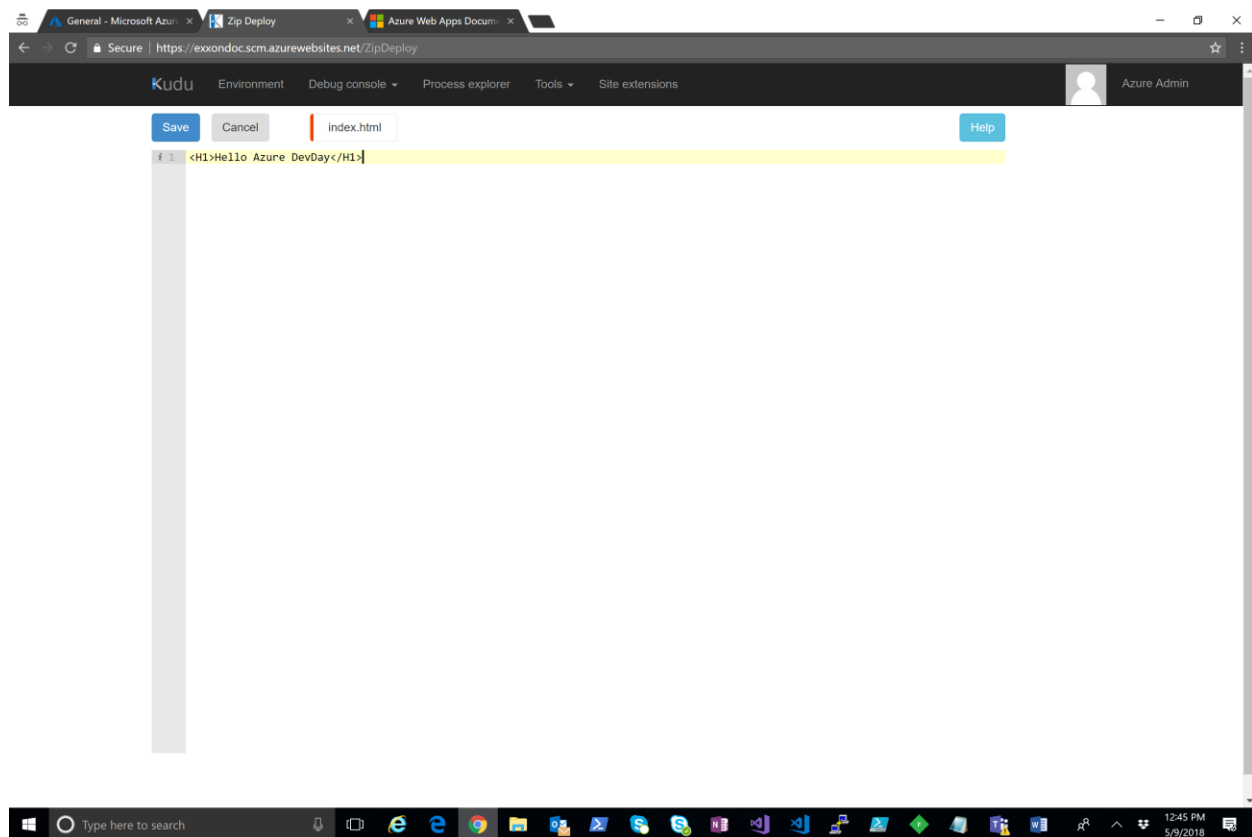

13 – It will open the “index.html” in the editor.

14 – Type in some HTML in the edit such as:

```
<H1>Hello Azure DevDay</H1>
```

15 – Now click on the “Save” button to save the file. Then go to your web app such as:

<https://exxondoc.azurewebsites.net/> and you should see the new page:

16 – Congratulations! You have completed this exercise.
